ELSEVIER

Comput. Methods Appl. Mech. Engrg. 147 (1997) 421–422

Computer methods in applied mechanics and engineering

Contents Volume 147

Volume 147, Nos. 1–2, 30 July 1997

On the fractal fracture in brittle structures. Numerical approach
O.K. Panagouli, E.S. Mistakidis and P.D. Panagiotopoulos 1

Parameter identification for finite deformation elasto-plasticity in principal directions
R. Mahnken and E. Stein 17

Finite element modelling of surface tension effects using a Lagrangian–Eulerian kinematic description
S.E. Navti, K. Ravindran, C. Taylor and R.W. Lewis 41

Unconditionally stable higher-order Newmark methods by sub-stepping procedure
T.C. Fung 61

Finite volume schemes for elliptic and elliptic–hyperbolic problems on triangular meshes
R. Herbin and O. Labergerie 85

A high-order upwind method for the convection–diffusion problem
D. Liang and W. Zhao 105

Coupled rigid-elastic motion of filament-wound composite robotic arms
S. Oral and S.K. Ider 117

The equivalence of stress- and strain-based plasticity theories
P.F. Lu and R. Vaziri 125

Predictor–corrector finite element approach for electroelastic analysis of hybrid composite plates
K. Xu and A.K. Noor 139

Modelling an undular bore with B-splines
L.R.T. Gardner, G.A. Gardner, F.A. Ayoub and N.K. Amein 147

Computational procedure for simulating the contact/impact response in flexible multibody systems
T.M. Wasfy and A.K. Noor 153

Convergence of Newton-type methods in incremental return mapping analysis of elasto-plastic problems
R. Blaheta 167

Structural damage detection using measured FRF data
Z. Wang, R.M. Lin and M.K. Lim 187

A finite volume method for analysing the bending deformation of thick and thin plates
M.A. Wheel 199

Volume 147, Nos. 3–4, 5 August 1997

A straightforward structure to construct shape functions for variable p-order meshes
M.S. Shephard, S. Dey and J.E. Flaherty 209

A simple impedance-infinite element for the finite element solution of the three-dimensional wave equation in unbounded domains
L.F. Kallivokas, J. Bielak and R.C. MacCamy 235

Artificial boundary conditions for two-dimensional incompressible viscous flows around an obstacle
W. Bao 263

Efficient redesign of damped structural systems for target transfer functions
I. Takewaki 275

Asymptotic derivation of a general linear model for thin-walled elastic rods
J.M. Rodríguez and J.M. Viaño 287

Virtual experiment as an educational aid in tribology of cutting
V. Marinov and I. Andonov 323

The scaled boundary finite-element method—alias consistent infinitesimal finite-element cell method—for elastodynamics
C. Song and J. Wolf 329

Two-stage strategy for simultaneous slewing and vibration suppression of flexible structures
X. Liu and J. Onoda 357

Numerical simulation for the problem of infinite elastic foundation
H. Han, W. Bao and T. Wang 369

A stabilized finite element method for particulate two-phase flow equations. Laminar isothermal flow
K. Hiltunen 387

Automatic remeshing for three-dimensional finite element simulation of welding
L.-E. Lindgren, H.-Å. Häggblad, J.M.J. McDill and A.S. Oddy 401
